Liability Mix: The Low Cost Benefit

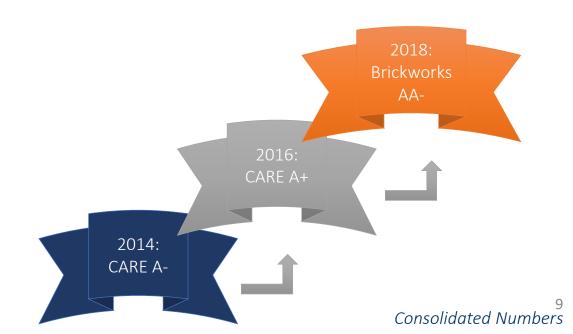

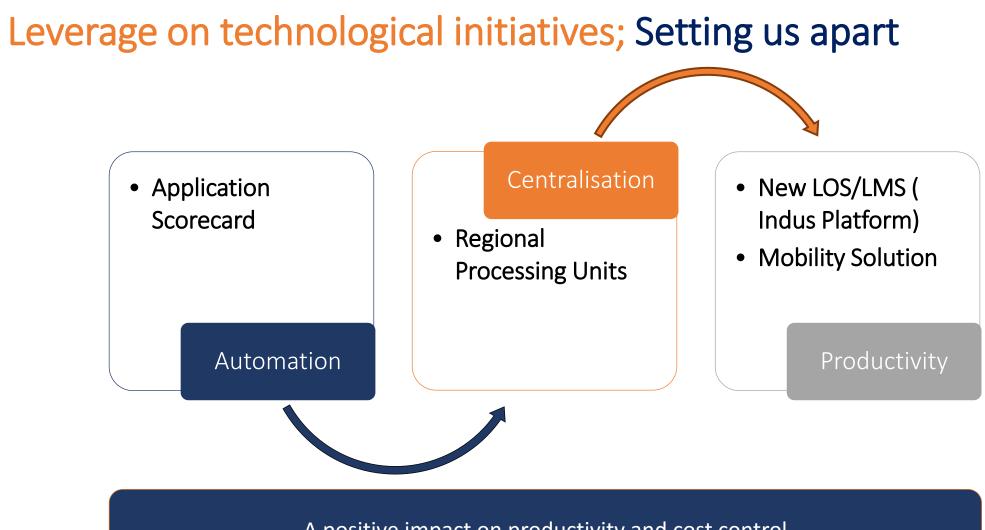

Market borrowings like CPs & NCDs contribute to <10% of CGCL's total borrowing mix, and hence, risk of bond defaults/liquidity crunch are negligible

Higher Share of Bank Borrowing >> Lower Overall Cost of Borrowing

- Low exposure to short-term money market signifies low probability of default
- CGCL's prudence in higher borrowing share from banks has reduced cost of borrowing to ~9.5 %

The CGCL Advantage: Optimal Mix of Borrowings & Lending

Competitive Advantage

Tightening Liquidity

Retail Lending

Higher borrowing costs >> Declining NIMs

Industry Scenario

As global & domestic liquidity tightens, high reliance on short-term borrowings could prove detrimental Retail loans are amortized on a monthly basis; thus, cash flows in ALM can be projected correctly Liquidity mgmt measures from RBI could force NBFCs to increase long-term borrowings, thus increasing COF & reducing NIMs

The CGCL Advantage <10% exposure to shortterm money market borrowings 100% small-ticket retail loans in MSME, Housing Finance segments Borrowing mix skewed in favour of banks & thus, NIMs to be sustained & gradually improved Annexure: About CGCL & Industry Scenario

MSME Lending: A Huge Unexplored Opportunity

The NBFC Advantage in MSME Funding

- Lack of formal avenues for financing ensures low penetration from banks
- Banks face issues in financing MSMEs due to high NPAs, high processing times and capital challenges
- NBFCs offer higher loan eligibility with shorter turnaround times
- Capital and lending norms for NBFCs are more lenient as compared to banks allowing them greater penetration in smaller towns and villages

MSME credit to grow at 12-14% over 5 years: ICRA

Non-bank share in MSME credit pie should expand to 22-23% by March 2022 vs 16% in March 2017: ICRA

SIDBI targeting total lending of ~INR 1.4 trillion in FY19, up 30% YoY

CRISIL pegs overall credit demand of MSMEs in India at INR 45 Trillion over the medium term
